

DARK FIBER SERVICES

Get all the benefits of network ownership without having to construct the physical network yourself. TDS® already manages proven optical networks—leverage our experience as your business expands.

SERVICE DETAILS

Dark Fiber is deployed, unlit fiber optic strands connecting two points within the TDS network. This service may be available for sale as both a long-term lease or as an Indefeasible Right of Use (IRU).

FEATURES AND BENEFITS

Flexibility – You light the network with your own equipment and can design it for the applications you need.

Security – Private, physical network infrastructure on your own dedicated strands of fiber maximizes your security.

Control – Transmission protocols and equipment are in your full control. Upgrade at will to keep up with technology or align with changing requirements.

Scalability – Scale your network to virtually any bandwidth without the need for costly and disruptive upgrades.
