

# OPTICAL WAVELENGTH SERVICES

TDS® private, point-to-point service is delivered over a state-of-the-art dense wave division multiplexing (DWDM) network. An excellent choice for high-capacity, low-cost, highly reliable transport.

## FEATURES

TDS® allows carrier customers to efficiently manage Ethernet, Private Line, SONET, Private Dedicated Rings, and IP networks. Scalable solutions reduce capital and operating expenditures, while avoiding frequent infrastructure upgrades.

- **Wireless** – Connect cell sites to MTSOs, or interconnecting multiple MTSO locations
- **Enterprise Business** – Connect multiple core sites or data centers with high-capacity, low-latency connectivity at 10Gbps
- **Data Centers** – Transport large amounts of data for redundancy and replication with low capital costs

- **CLECs/ISPs** – Market expansion to fill gaps in current network availability in order to reach large customers and data centers, as well as IP access

## SERVICE DETAILS

Optical Wavelength Service is available in bandwidths of 10Gbps and supports link fault propagation. You can order diversity with multiple routing options. Router diversity as well as optic diversity are available.
